

Dear Contractor,

Following is the connection process to the Thatcher Hill Water Company (THWC) System:

- We only allow three excavators to connect/tap our main water lines. Their contact information is listed below.
- You, the contractor, are responsible for getting on the excavator's schedule. We will not do this for you. Their fee is separate from the connection fee paid to Thatcher Hill Water Company.
- The connection fee is \$20,000 and must be paid before the meter can be set.
- The connection to the main water line must be stubbed to the lot and the line from the house must be attached to the yoke before a meter can be set. Please advise our Water Operator when you plan to excavate so we can assist you if necessary.
- Both ends must be stubbed to the yoke to perform a pressure test, so make sure the water inside the home is turned off. We will not be responsible for any water damage if it is not shut off.
- We normally will not locate water lines. We do not have that capability. We cannot confirm the exact location or depth because of lack of original installation mapping. We can provide approximate locations. We are not responsible for damage if you hit a water line. Go slow and call if you have concerns or questions and we will provide assistance.
- Marble Hill Subdivision roads are 50' wide, 25' of pavement and 12.5' of shoulder on each side of the asphalt. These are Box Elder County roads. Any excavation of these roads must be restored to the original roadway including asphalt and shoulders.
- Notify the Water Operator when you are ready for a meter to be set. We will set the meter as soon as possible. It may take up to two weeks to accomplish the installation. If there are issues with the property, i.e., unpaid previous water assessments, or other complications, these need to be resolved before the installation of a meter will be done.
- Do not block access to the meter hole or the meter will not be installed.

By signing this document, you confirm that you understand the rules and requirements of the Thatcher Hill Water Company. We look forward to working with you.
